

Power Clean In

High Pressure Cleaner for Evaporators
Ready to Use

Clean Power In is the perfect solution to clean evaporators, even if they are placed in locations that are difficult to access.

Clean Power In has been designed to achieve a consistently high delivery pressure, which allows to remove the dirt that accumulates between the plates.

The high pressure is combined with the cleaning action in order to increase the effectiveness of this product and to vigorously attack the dirt, without damaging the materials with aggressive substances.

Its powerful jet allows you to reach units installed a few meters away and can be a good alternative if you can not get them with the pressure washer.

Rinsing not required.
